INSTALLATION

BEFORE INSTALLATION

Before laying TM AERO tiles, sweep the original substrate or vacuum it with a vacuum cleaner.

LAYING THE FLOORING

Before the actual installation, determine the starting point and direction of laying. We recommend aligning the tiles so that the locks are in one direction and continue from the door/entrance to the back. After the entire surface has been laid, it is time to cut out the individual parts or cut outs around fixed points.

AN IMPORTANT NOTE: Because polypropylene expands due to high temperatures, always leave an expansion joint around all fixed points (walls, columns, door thresholds, passages, etc.). Allow for this gap during installation. Our recommendation: The expansion joint should be 1% of the total length of the surface and at least 3 cm.

TILES CUTTING

It is possible to use a rectilinear or circular saw for easy cutting of tiles. Please take care of your safety.
